🌐 linkedin.com/in/eyoab-nigusie

PROFILE

Software Engineer with an exceptional track record of designing, building, and shipping production-grade systems independently. Expert across full-stack ecosystems, specialized in building **real-time deep learning visualizers**, cross-platform mobile environments, and high-concurrency architectures. Proven capability in managing software products from raw Figma concepts to fully optimized cloud deployments.

TECHNICAL EXPERTISE

MOBILE ECOSYSTEM	Flutter, Dart, Firebase Suite, Material 3 Design System
AI / DEEP LEARNING	TensorFlow, Keras, FastAPI, Python, OpenAI API, Server-Sent Events (SSE)
FRONTEND SYSTEMS	React, TypeScript, D3.js Data Visualization, Zustand State Management, Tailwind CSS
BACKEND / WEB	Node.js, Express, MongoDB Atlas, JSON Web Tokens (JWT), WebSockets, RESTful APIs
ENGINEERING TOOLS	Git, GitHub Workflow, Figma UI/UX, CI/CD Engine, Render, Vite Build Tool

SELECTED PROJECTS

AI Neural Network Visualizer

2024 – 2025

AI Engine & Visual Analytics · [Live Architecture](#) ↗

- Engineered a full-stack deep learning simulator allowing end-to-end multi-layer structural assembly, custom hyperparameter evaluation, and visual telemetry streams.
- Architected a multi-threaded Python FastAPI layout compiling functional components dynamically on-the-fly and pushing metric data to endpoints via Server-Sent Events (SSE).

EduConnect — Cross-Platform Mobile Platform

2024 – 2025

Full-Stack Mobile Infrastructure · [Source Code](#) ↗

- Constructed cross-platform architecture in Flutter managing dual-layered permission systems, pedagogical content trees, and client dashboard metrics.
- Deployed JavaScript API backends managing institutional tokens, cross-origin security layers, and user validation endpoints.

Kefit Job Matching Platform

2024

Real-Time Full-Stack Application · [Production Build](#) ↗

- Engineered secure authentication structures incorporating role-driven visualization pipelines across modern web profiles.
- Integrated persistent bi-directional tracking nodes utilizing low-overhead WebSockets to instantly broadcast state shifts.

EDUCATION

B.Sc. Software Engineering Expected 2028

Adama Science and Technology University

AI & Machine Learning 2024

Self-Directed Study • Fast.ai • Coursera

LANGUAGES & CORE

Amharic Native Proficiency

English Professional Fluency
